

Supplementary Figure 7: Unaltered C3a and C5a levels in the BALF of *TREM-2*^{-/-} mice following *S. pneumoniae* infection

WT and *Trem-2*^{-/-} mice (n = 6-7 mice per genotype) were intranasally infected with 10⁵ *S. pneumoniae* and C3a and C5a levels were determined in the BALF 6 and 24h post infection. Data represent mean ± SEM versus WT.
