Correction: Contemporary and relic waters strongly decoupled in arid alpine environments

Brendan J. Moran, David F. Boutt, Lee Ann Munk, Joshua D. Fisher

There is an error in the caption of Fig 3. The cited reference should have been "Rohrmann et al., 2014" instead of "Rissmann et al., 2015". Please see the complete, correct Fig 3 caption here.

Fig 3. (a) Processes controlling physical water distinctions and interactions based on $^3$H, $\delta^{18}$O, and $\delta^2$H signatures. Circles are proportional to the average magnitude of discharge at each stream site, SdA streams are plotted within the black dashed box. The grey vertical bar is the GMWL, and the blue box at the top represents the approximate range of meteoric input waters in the region (based on Moran et al., 2019 data). Arrows depict the influence of important hydrological processes and interactions. (b) These data plotted in $\delta^{18}$O-$\delta^2$H space relative to the LMWL (Rohrmann et al. 2014) and evaporation trends of basin floor waters in SdA and on the higher elevation Puna plateau.
